### TIE-DOWN ASSEMBLY USAGE CHART:

This chart is provided as a guide to meet the basic minimum current in service requirements of the FMCSA<sup>1</sup> and the DOT<sup>2</sup> published Sept 27, 2002. The following table lists the minimum number of chain assemblies required to secure a load per DOT & CVSA<sup>3</sup>. \*This chart is only to be used as a reference.

\*Many factors affect the proper method of cargo securement including the length and type of the cargo to be secured. Refer to the most recent revision of The Dept. of Transportation (DOT) Title 49 regulations for more complete requirements regarding the proper methods and number of tie-downs required.

SCC Chain Grade	Size (Inches)	WLL	Net weight of cargo to be secured in Lbs.							
			20,000	25,000	30,000	35,000	40,000	45,000	50,000	
<b>Alloy</b> Grade 80 (S8, SX8, T-80)	5/16	4,500	3	3	4	4	5	5	6	
	3/8	7,100	2	2	3	3	3	4	4	
	1/2	12,000	1	2	2	2	2	2	3	
<b>Transport</b> Grade 70 (S7, SX7, S-70)	1/4	3,150	4	4	5	6	7	8	8	
	5/16	4,700	3	3	4	4	5	5	6	
	3/8	6,600	2	2	3	3	4	4	4	
<b>High Test</b> Grade 43 (S4, SX4, S-43)	1/2	11,300	1	2	2	2	2	2	3	
	1/4	2,600	4	5	6	7	8	9	10	
	5/16	3,900	3	4	4	5	6	6	7	
<b>Proof Coil</b> Grade 30 (S3 SX3, S-30)	3/8	5,400	2	3	3	4	4	5	5	
	1/2	9,200	2	2	2	2	3	3	3	
	1/4	1,300								
	5/16	1,900	Due to the low working load limits of S-3 chain, SCC does not recommend using Proof Coil Chain for Transport tie-down or cargo securement.							
	3/8	2,650								
	1/2	4,500								

<sup>1</sup>FMCSA: Federal Motor Carrier Safety Admin  
<sup>2</sup>DOT: Department of Transportation  
<sup>3</sup>CVSA: The Commercial Vehicle Safety Alliance

*This chart is based on each tie-down secured to a trailer anchor point, traversing across or through the load and then secured to another anchor point on the trailer.*

If used by securing the tie-down to the trailer anchor point and attaching it directly to an article of cargo (IE: a vehicle), the quantity of tie-downs required shall be 2 times the quantity listed in the chart above.

**WARNING:** Never exceed Working Load Limit as stated in catalog and on strap tags to determine the number of tie-down assemblies and/or hardware required for safe operation per federal D.O.T. FMCSA 49 CFR Parts 392-393, CCMTA and the C.V.S.A inspection criteria. Remember, all assemblies are only as strong as their weakest point, including the point of attachment.

**WARNING:** Never exceed Working Load Limit. Load binding systems store energy which can release suddenly, causing serious injury. Stay clear of handle, bars and other binding equipment as it could release without warning and with extreme force. Remember, assemblies are only as strong as their weakest point, including the point of attachment. **▲ These products are NOT designed or approved for overhead lifting.**
